21:37

23:09

In Germany, the species probably first ran wild ca. 1872 from the site of an abandoned nursery near Oberplanitz, which today belongs to Zwickau. In addition to being used as an ornamental plant, it was also used as a cover and grazing plant, as fodder for embankments and was initially considered a substitute for asparagus. It spreads from plantations by rhizome growth and mainly by accidental transport of rhizome parts or illegal dumping of garden waste.

*Fallopia japonica*

Second edition

The images show the scans made on the night of August 6 2018 from 21:37 to 23:09, of one plant of the species *Fallopia japonica* located at 50°40'34.5"N 12°28'50.7"E.
